A consortium of various organizations drawn from the Civil Society (CSOs), Business/Private sector, academia and research institutions engaging in renewable energy work across the continent of Africa.

Facilitated and hosted by PACJA, the consortium was established in April 2016 on the sidelines of the African Ministerial Conference on Environment (AMCEN) following a stakeholders’ consultative meeting on how to strategically engage and influence the ongoing renewable debate in the continent.

It currently brings together key energy Actors, and plays a central role in the evolving debate on the transition to low-carbon, climate-resilient green economic development pathways.

**Vision**

Africa continent’s energy demands met through low carbon and sustainable, people-centred, affordable, pro-poor decentralised energy systems.

**Mission**

To build a strong movement of like minded organizations to influence investment in renewable energy as well as for energy-poor living in rural communities to have access to clean, reliable, affordable and sustainable energy.

**Objectives**

- To carry out energy related Policy research and analysis in order to inform our advocacy work.

- To create a strong movement of organizations working on, or interested in, engaging with policy/advocacy work at the local, national as well as continental level.

- To influence national governments as well as strategic regional development bodies such as the African Development Bank (AfDB) to prioritize policies that will secure investment in the sustainabale energy sector as well as improving access to energy by the energy-poor communities.
